

« EU Branch Background CALB Profile

China Aviation Lithium Batteries (CALB) is a leading company devoted to Li-ion batteries and power systems for various applications.

As a large nationally owned enterprise, CALB is headquartered in Luoyang, China. With \$140 million in registered capital and more than \$600 million invested in the new industrial park, CALB employs more than 2,000 employees worldwide.

Being the “Global Golden Lithium Battery Manufacturer”, CALB is leading the industry in implementing a strategy for developing renewable energy storage solutions. From mining, transportation, telecommunications, and rail applications, CALB's Lithium-ion cells will exceed our customer's expectations with their high performing capabilities.

With a global vision, CALB advances into the rapidly growing reusable energy markets of the United States, the European Union, Japan, Korea and other countries. CALB strives to promote the creation of a low carbon global economy and sustainable development. Ranking among the top exporters of Lithium-ion batteries and energy storage in China, CALB aims to provide the best battery solutions available to consumers today and in the future.

With the rapid development of our European business, we took the decision to set up CALB Europe Branch.

Why choose Stuttgart Region ?

As CALB considers electric drive trains as a growing business for Lithium-ion Battery providers, we are rapidly building up expertise in this business environment and are seeking close cooperation to the leading automotive industry worldwide. Stuttgart Region is the heart of the German Automotive industry with Daimler AG, Porsche, Audi and BMW engineering centers in close distance. Furthermore the area is committed to electric drive trains with political support, focused universities and research organizations as well as high professional start up companies such as EFA-S GmbH.

Moreover the area is not just leading in automotive industry but as well in electrical energy storage systems since some major manufacturers of such systems are placed in the region too.

Trade Matching (Matching the trade company and factory, win-win.)

« Function of CALB Europe Support

Stock

Fast time for delivery and small scale service parts

CALB Europe will develop and maintain a stock of cells for serving fast and small scale needs. The operation will include shelving, grouping, balancing, repacking and delivering of cells according to the specifications of different market requests

Recycling

Collect cells and prepare for recycling

With one of the first recycling test plants of Lithium ion cells in operation, CALB is actively pursuing methods to recycle Lithium ion cells. The European Branch will collect retired cells and will actively work to develop commercially viable recycling concepts in Europe.
